Rama Lana Komara

Fullstack Web Developer

+6289614238447 | rlanakomara7@gmail.com | Bogor, Indonesia

LinkedIn | Github

Fullstack Web Developer with hands-on experience building responsive and functional web applications using **JavaScript, React.js, and Golang (Gin Framework)**. Experienced in developing **RESTful APIs**, implementing **JWT authentication and role-based access control**, and managing relational databases with **PostgreSQL**. Proficient in frontend development, backend integration, and state management, with practical experience using **Redis, Docker, Git, and GitHub**. Demonstrated ability to develop end-to-end applications through independent and collaborative projects, including URL shortening, event management, financial transactions, and API-driven platforms. Passionate about clean, maintainable code, problem-solving, and continuous learning in modern web development.

Project Experiences

Koda Tech Academy - Bogor, Indonesia **Jul 2026 – Oct 2026**

Fullstack Web Developer

Koda Academy – ShortLink URL Shortener Web App | Oct 2026 (Full-Stack Project)

- Developed a full-stack URL shortening application using React.js, Tailwind CSS, Golang (Gin), PostgreSQL, Redis, and Docker.
- Built RESTful APIs for user authentication, URL shortening, custom slugs, link management, and redirection.
- Implemented JWT authentication, bcrypt password hashing, and protected routes to ensure secure user access.
- Integrated PostgreSQL for data storage and Redis for URL caching and JWT token blacklisting.
- Developed responsive frontend interfaces featuring login, registration, dashboard, URL search, pagination, and link management.
- Managed database migrations, Docker Compose services, and source code versioning using Git and GitHub.

Koda Academy – E-Wallet Financial Management Web App | Oct 2026 (Collaborative Project)

- Collaborated on the development of a full-stack E-Wallet web application using React.js, Tailwind CSS, Golang, PostgreSQL, and Docker, supporting responsive financial management features across mobile and desktop platforms.
- Developed a responsive 3-step money transfer flow (Find People, Set Nominal, Finish), featuring recipient selection, currency formatting, transaction notes, and transfer summaries.
- Built interactive frontend components using React Hooks, state management, props, and conditional rendering, implementing recipient search, favorite management, PIN entry, and transaction success/failed modals.
- Worked within a full-stack architecture powered by a Golang backend, PostgreSQL relational database, and Docker-based containerization, supporting the application's financial transaction workflows.
- Collaborated with team members using Git and GitHub, managing feature branches, integrating shared UI components, and maintaining responsive layouts based on Figma designs.

Koda Academy – EventHub Event Management Web App | Aug – Sep 2026 (Full-Stack Project)

- Independently built a full-stack event management platform within a 6-week timeframe, delivering 30+ UI screens across public browsing, user dashboard, event creation, and admin management flows.
- Designed and implemented a relational PostgreSQL database with 17 interconnected tables, supporting 3 distinct user roles (Attendee, Organizer, Admin) with role-based access control.
- Built a modular frontend using React.js, Tailwind CSS, React Router, and Context API, implementing reusable components, nested layouts, and protected routes across authentication, event, and community modules.
- Engineered RESTful API endpoints in Golang (Gin) to manage users, events, communities, registrations, and admin operations, fully integrated with the 17-table PostgreSQL data model.
- Delivered a fully functional end-to-end platform spanning 3 user roles and 5+ core modules (auth, events, communities, notifications, admin dashboard), demonstrating independent full-stack development capability.

MovieList – Movie Listing Web Application | July 2026 (Frontend Project)

- Built a 5-page movie listing web application using HTML5, JavaScript (DOM manipulation), and Tailwind CSS, covering login, registration, guest browsing, movie listing, and detail views.
- Integrated The Movie Database (TMDB) REST API using Axios, fetching and dynamically rendering 100+ movies via paginated requests (5 pages × 20 movies/page).
- Developed a movie detail page combining 2 API endpoints (movie info and credits) to display synopsis, rating, director, and top 5 cast members in real time.
- Implemented client-side authentication (login & registration) with form validation and localStorage-based session management, including a guest-mode option for unauthenticated users.
- Applied event-driven DOM manipulation to build interactive UI elements — including password visibility toggle and dynamic content rendering without page reloads.

Working Experience

PT. ANUGERAH MORTAR ABADI (TRIPUTRA GROUP) - Bogor, Indonesia

Dec 2019 – Jun 2026 *Quality Assurance (QA)*

- Lead quality improvement initiatives by analyzing customer complaints and root causes, reducing recurring defects.
- Performed lab testing (compressive strength, pull-off, flexural) to ensure compliance with quality standards.
- Collaborated with Production, R&D, and Engineering to resolve quality issues and optimize processes.
- Conducted ISO 9001 internal audits across Finance and Procurement, tracking non-conformities and corrective actions.
- Drove Kaizen initiatives through process optimization, work instructions, and quality data analysis, Awarded 3rd Place, QCC Improvement Competition 2025.

PT. SURYARAYA RUBBERINDO INDUSTRIES (ASTRA GROUP) - Bogor, Indonesia **Aug 2017 – Aug 2019**

Final Inspection (Quality)

- Conducted 100% final inspection of tire products to ensure compliance with quality standards and technical specifications.
- Performed visual inspection, defect identification, and OK/NG classification to prevent non-conforming products from reaching customers.
- Operated Balancing and Run-Out inspection machines to detect product abnormalities and non-conformities.
- Progressed from Junior → Middle → Senior Inspector, taking on expanded responsibilities across inspection, testing, reporting, and production coordination.
- Identified and segregated NG/rejected products, and communicated inspection findings to the Production team to support timely corrective actions.

Education

Koda Tech Academy - Bogor, Indonesia **Jul 2026 - Oct 2026**

Fullstack Web Developer

- Built responsive front-end interfaces using HTML, CSS, JavaScript, React.js, React Router, Redux Toolkit, and Tailwind CSS.
- Developed back-end services using Golang, Gin-Gonic, and PostgreSQL, including RESTful API design and frontend-backend integration.
- Practiced DevOps and collaborative development workflows including Git, Linux/WSL, SSH, Docker, and backend deployment.
- Completed multiple end-to-end fullstack projects, applying clean coding practices and structured problem-solving from planning to deployment.
- Collaborated in a team-based, project-driven learning environment, strengthening communication and adaptability in a fast-paced development setting.

Universitas Indraprasta PGRI, Informatics Engineering - Jakarta, Indonesia **2019 – 2023**

Bachelor Degree of Computer Science (S.Kom)

Studied computer science fundamentals, programming, databases, and software development.

SKILL

Frontend Development – React.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, React Router, Redux Toolkit, Vite, Responsive Design
Backend Development – Golang, Gin-Gonic, RESTful API, Middleware, JWT Authentication, Frontend-Backend Integration
Database – PostgreSQL, SQL, GORM, Database Integration
DevOps & Deployment – Docker, Docker Compose, Linux CLI, WSL, SSH, Backend Deployment
API Design – RESTful API, API Integration, Postman
Version Control – Git, GitHub, Git Workflow
State & Client Storage – Redux Toolkit, React Context API, Local Storage, Session Storage
Security & Best Practices – Input Validation, JWT Authentication, CORS, HTTPS
Development Tools – VS Code, Postman, npm, Vite
